A Publication by the Siamese Cat Society of NSW Inc.

Volume 63 December, 2015 Edition

Proudly affiliated with CATS NSW

A GIANT THANK YOU TO OUR PROUD SPONSORS FOR THE YEAR

Thank you to Jeanette for donating Oz-Pet Litter and Littertrays as prizes.

Thank you for providing packs of your easy to digest lactose free milk for prizes.

Thank you for your contribution of your popular tasty cat treats.

Thank you for your fabulous donation of your Black Hawk Cat Food for prizes.

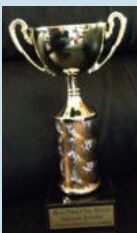

Thank you to Lyn for providing quality selection of surface disinfectant.

Thank you to Jenny for your generosity.

Thank you to Joan Derks for your fabulous sponsorship of the Rescue Cats.

LJ Hooker Picton & **Fullcircle Siamese**

Proudly sponsoring the Award for the 'Best Pure One Breed Siamese' exhibit in addition to publication and postage costs of the FELIS magazine.

Letter from the Editor

My first full year as your editor is coming to an end and I must admit that I had no idea just what I was taking on when I agreed to become the producer of our little magazine.

It is with heartfelt thanks that I give my daughter Brooke Hilton, for her expertise, in putting this little mag into some semblance of professionalism. Thanks also must go to my husband John Ferguson for allowing me to use our professional copier and at the cost to our office, not our little society, to get the production done and dusted through LJ HOOKER PICTON.

It has been a steep learning curve, but at the same time a very rewarding one, when I see what has been produced. I can only hope that you as the

reader is as happy with the new look Felis and its content.

Once again though I am on **the call for anyone who would like to contribute to our Magazine**, to please do so and to forward any **photos, stories, poems or anecdotes** you may seem fit. Or you will only be hearing from "moi" and I am really quite boring, so please be brave and send in something that we can use.

So come on everyone, give me something to put in the next edition, so you won't have to only look at my cattery and hear my stories!!!!

May I now take this opportunity in wishing everyone a **VERY HAPPY CHRISTMAS AND A SAFE AND HEALTHY NEW YEAR.**

PRESIDENTS REPORT

Oh how quickly this year is rushing by!! It won't be too long before 2015 is history and 2016 brings us ever closer to our 59th All Breeds Show on February 27th at the Picton Shire Hall. Our two All Breeds judges will be Lesley Freeman, President of GCCFV and Joan Henderson, a long time All Breeds judge also from GCCFV. They will be joined by the most recent Cats NSW judge Hazel Rossiter who many members will remember as a NSW CFA exhibitor and judge who in recent years has been with the ANCATS association.

Hazel will judge the special awards classes, Joyce Selby Memorial (Best "Pure" Siamese) and LJ Hooker Picton (Best "Pure" Siamese bred by Exhibitor as well as Supreme Companion and the Pet Rescue event.

The show season will have reached its conclusion in each registering body in NSW and for most around Australia by the time this issue is distributed. Our members continue to promote our breed and reach the heights of Cat of the Year success as well as showing off those wonderful attributes that we all know are possessed by the Siamese that we breed.

Congratulations to the following :

Astraxalotte Cattery (Lee and Cheryl Gallagher) with multiple placings
 Garthowen Cattery (Chris Wiseman)
 Trilian Cattery (Grant & Penny Richardson)
 Christernee Cattery (Peter & Christine Gunczy)
 Kalinya Cattery (Tony & Bev Hurry)
 Lookatmese Cattery (Jay & Amie Hobbs)
 Lealjo Cattery (Joan Wright)

In very recent years a new disease PRA (Progressive Retinal Atrophy) has been identified in our Siamese breed which needs each and everyone of us to not only be aware but to manage out of our breeding lines.

Simple, effective DNA testing is available to identify this disease so there is no reason why we cannot work together to combat its intrusion. Please read my article in latter pages of this issue.

Our AGM date will be announced shortly & I encourage you if at all possible to attend and to also nominate yourself to be on our SCS Committee. It is true that many hands make light work & we could well do with some more hands.

Finally I must thank my fellow committee members for their work this year and for the support they have given me as your SCS President.

May each of you have a **Very Very Happy Christmas** and a **Prosperous New Year** with family, friends and furries and I look forward to any and all things Siamese that come along in 2016.

Bye for Now

Tony Hurry

NOTICE OF ANNUAL GENERAL MEETING SIAMESE CAT SOCIETY OF NSW

*Notice is hereby given that the NEXT AGM for the SCS
is going to be held on:*

Date: Saturday 30th January , 2016

Time: 1.00pm

Venue: 'FullCircle Farm'

Lot 423 (No 6 if googled) Roundhill Road, Wilton

A SPECIAL GENERAL MEETING shall precede the AGM to vote on the motions to changes to the constitution.

ALSO VOTING SLIPS FOR YOUR VOTE. Make your vote count!! Come and join our team!!

Your CURRENT 2015 Committee Members are:

- | | |
|--|--|
| <ul style="list-style-type: none"> * TONY HURRY: President * SHARRYN HILTON: Secretary / Editor * PETER GUNCZY: Web Master * VALDA MCDERMOTT | <ul style="list-style-type: none"> * JOHN FERGUSON: Vice president * SHARON BLACK: Treasurer * CHRISTINE GUNCZY: Kitten Register ** <i>Committee meeting immediately following</i> |
|--|--|

On the same day there is going to be a WORKING BEE to sort out the SCS tables, cages and equipment for future use.

The WORKING BEE will commence at 9.30am at the same address.

Any volunteers gratefully received!

As a reward, we are going to have an Australia Day BBQ at noon, bring a plate and SCS will supply meat, rolls and non alcoholic drinks.

BRING YOUR AUSTRALIA DAY FLAG!!!

Pepe's Story

(appearing front cover)

By Marion Anstis (New Member)

Pepe is an adorable Chocolate Point purebred Siamese now aged one year. He and I got together when he was a baby in August 2014 at 'Fullcircle Siamese' cattery. I was first captured by his sweet face and lovely eyes, but soon his loving, playful personality came to the fore as the weeks of "kittenhood" went by before I could take him home. Over the next few months we shared lots of fun, cuddles and 'school' times as he learnt house rules (you know how well cats follow these!). Not sure which of us was the pupil! But he learnt to lead within six days and before long I was able to take him on short walks along bush tracks near my home which he seemed to enjoy, as long as no dogs were around. He is strong-willed, super healthy and absolutely devoted to his human Mum. Needs to know where I am at all times of the day, and I score extra points if I'm ready to drop everything and play! But it's really Pepe's story, so I'll let him continue.... "it's fun retrieving my favourite soft toy Mum made me – I keep her busy by bringing it back to her to throw for me again. Then there's always the game of 'lose my favourite toy' so Mum has to go look for it under the bed, cabinet, fridge, lounge, laundry etc. Of course I help and follow her around while she crawls around with lots of suggestion. Boy I get a plenty of fun mileage out of that one! Speaking of the laundry, I love hiding a pipe cleaner in the washing machine – jumping in to find it is such fun, and so far I've managed to get it before Mum turns the machine on! Then there's finding and claiming the highest points in the house – one of my favourite games. Especially good if I keep *really* quiet while Mum is calling me and looking all over the house, and I've fooled her by hiding in my latest new perch on top of the bookcase! Love her reaction when she eventually finds me grinning down at her!

If only I could speak English, I'd say 'sucked in'! Water running out of taps has always fascinated me – tastes good and twinkles as it runs! Then there's the bath – have had great times racing around it playing golf with a ping pong ball – the idea is to score goals in the plug hole. It can be a bit of a pain when she's working on the computer and I need attention, so some tricks I've learned are to walk in front of the keyboard and stand right in front of the screen looking innocent and beautiful, but if that doesn't work, I bring my favourite toy in and try to push it down the hole behind the screen where all the power cords go – this invariably causes the desired reaction, especially if I play with the modem! When I do get her attention, she often takes me bushwalking, which is pretty good. I get to go for a short drive, then walk along bush tracks where I can climb on logs and take in all the smells of dogs and cats along the way. It's fun watching birds, although Mum would never get me get near them. Night times are five star really, as I get to sleep under the bedclothes right against her tummy – never need a hot water bottle! I get all I need to eat, but sometimes I like to get a taste of what Mum has for dinner and I find by being on my most polite behaviour, sitting patiently until she's had her fill, I usually get a titbit or two at the end (see, I *can* be good when I need to). My next trick will be to work on her until I get more! All in all I'm pretty lucky really, but sometimes I wish I had a companion when Mum has to go out, Maybe that will happen one day... "And yes Pepe, it will". I am soon to bring home a little blue-point girl named Marli, so I really hope you two can become great friends. I'll certainly be in for some fun and games when you two get wound up, won't I?! And readers, don't take all of what Pepe says as gospel – I'm really the boss (I think...)!

FUN FUN FUN

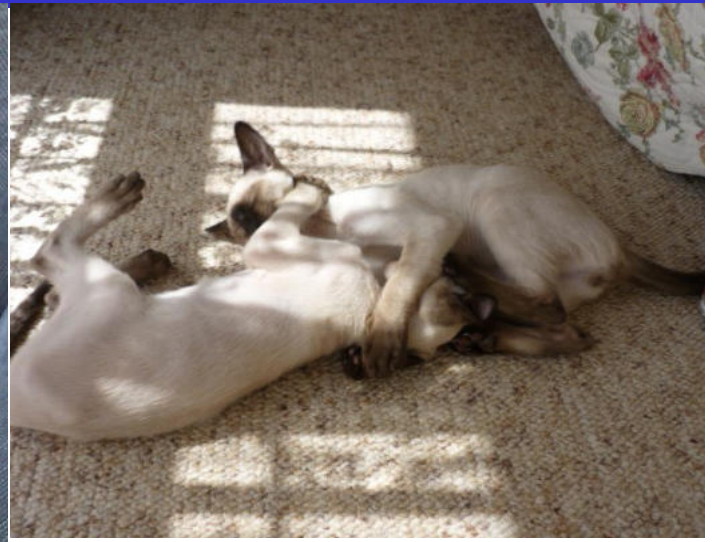

YOU'RE SURROUNDED!

SPECIAL REPORT

By Tony Hurry, President, Siamese Cat Society of N.S.W. Inc.

We Need You !!!

Our most recent challenge as breeders of Siamese is now with us in the form of a retinal disease known as Progressive Retinal Atrophy (**PRA**). Thankfully, due to some sharing of information and results, along with a desire to breed it out with the use of DNA testing this challenge has a good chance of success...at least for those who choose not to remain ignorant of it.

Personally speaking, we at Kalinya Siamese had not thought to be involved with this disease when it first became a discussion point around two years ago and remained oblivious to characteristics of the disease and its genetic invasion in to our Siamese. Thankfully a recent approach to purchase a kitten for stud from us by a registered Australian breeder has identified to us that PRA is in our lines. The kitten in question following DNA testing was found to be **AFFECTED/POSITIVE – 2 Copies**. Subsequently, the decision was agreed not to proceed with sale as stud. He is now living with our friends who are already owned by our Kalinya Siamese so that we can watch and learn of any effects of him being Affected.

We then took the decision to DNA test each of our five breeding cats and one former breeding cat for PRA. The following results amazed and obviously alerted us to each cats PRA status and therefore as to how we could go about managing our breeding programme.

J'Magz OUTBACK of Myrlyn (imp USA) (M) Carrier/Heterozygous – one copy detected

Christernee MILLA (F) Normal/Clear

Kalinya OD DELLINA (F) Carrier/Heterozygous – one copy detected (Outback daughter)

Elizabethcat South YUMI-of-Kalinya (imp Japan) (M) Affected/Positive – two copies

Kalinya OM JAZZI (F) Normal/Clear (Outback daughter)

These results, in consideration of not reducing our gene pool, will find us not desexing our carriers or even Yumi who is Affected/Positive **BUT** we will selectively breed, therefore not mating carrier to affected and only allowing normal/clear females to be mated with him.

As you will read in documents that I have included with this article, it is quite early days in establishing proper sample data to support to what extent PRA carriers & PRA affected kittens and cats show signs or evidence of blindness. In our decades of breeding Siamese we have only found one cat with blindness. In fact he was our daughters, a Kalinya seal point neuter who at eight years of age lost sight. He lived until 12-1/2 years of age with this condition and with a sighted litter brother, healthy and happy. Was this due to PRA or was it a coincidence with loss of sight due to another cause? We will never know as he passed away prior to us having any awareness of PRA & that DNA testing was available. Other breeders with whom I have spoken also indicate the rarity of blindness however it is a disease and we are each encouraged to be aware and to manage it accordingly.

After all, as breeders we are bound by each of our Associations Objects and our Code of Ethics which primarily is to **breed to improve**.

DO NOT PANIC!!! This is manageable and even more so if we can all work together!!

DNA Testing for PRA

Importantly there is now a DNA test for the rdAc mutation which is thought to be the most common cause of PRA. The presence of both sets of the recessive gene, indicate the cat will suffer from progressive retinal atrophy and ultimately blindness.

Is PRA in Siamese Cats Something New?

No PRA is not something new, what is new is an increased awareness and availability of DNA testing. People will probably think Siamese and Oriental cats never went blind in the past so what has changed?

Well maybe this is true or perhaps the cats that were PRA positive gradually did go blind. Due the gradual nature of the progression of the disease perhaps these cats adapted relying more so on their other senses.

It seems possible that PRA has not been diagnosed because the cats have not shown symptoms until they are older. Vets may have dismissed it as age related deterioration.

Could it be that blindness has been noticed and not reported to breeders? Or worse it has been reported and ignored?

I could offer a variety of other theories; but that is exactly what they would be – theories.

The responsible thing to do at this stage is to start to collate some real data. To gather this data we must start by DNA testing our cats. Gathering data on the PRA status of cats and also data on how many cats are actually going blind (or indeed not going blind) are both essential to enable informed choices regarding potential registration policy changes.

On a personal note I must admit I am not totally convinced that we have a massive problem at this stage. What I am sure about though is without more research we will never know if we have a problem. As things stand today I am not in favour of any registration policy changes – we do not have enough evidence one way or the other!

There have been cats diagnosed with PRA in this country. The cats in question tested positive for two sets of the rdAc mutated gene which is the gene thought to cause progressive retinal atrophy.

Below is a screen shot of the results for various gene tests performed at Langford which include the Siamese and Oriental cats tested for PRA and their results. Although the results are interesting, at this stage it would be very unwise to make any conclusions based on this data. There is simply not enough information to make any decisions with one exception. **We need to test more cats!**

From Manuella Ferut

Progressive Retinal Atrophy in the Abyssinian Cat

Clinical Characteristics

Kristina Narfström

Ninety-four cases of a hereditary retinal degeneration in household Abyssinian cats were found in Sweden, mainly during a 3-year period. The disease was investigated by ophthalmoscopy, fluorescein angiography, electroretinography, and light microscopy. A bilateral retinopathy was usually first seen in affected cats at the age of 1.5–2 years. Fluorescein angiography did not demonstrate abnormalities of etiological significance to the disease process. A reduction mainly of a- and b-wave amplitudes in the ERG indicated a generalized photoreceptor disease. Light microscopy showed that the photoreceptor layer was primarily affected, while other retinal layers were mainly normal. The midperipheral and peripheral retina was affected more severely than the retina of the posterior pole until late stages of disease, when there was a generalized loss of photoreceptors. The clinical and laboratory findings suggest that PRA in these Abyssinian cats is a heritable photoreceptor degenerative disease with a fairly slow rate of progression. *Invest Ophthalmol Vis Sci* 26:193–200, 1985

Until recently, there were only a few reports on suspected hereditary retinal degenerations in the domestic cat. A generalized progressive retinal atrophy (PRA), possibly inherited, has been recognized in the Siamese^{1,2} and Persian³ cat breeds. In domestic mixed-breed cats an early onset photoreceptor degeneration has been reported⁴ that is dominantly inherited.*

PRA in the Abyssinian cat was recorded in Sweden in 1981.^{5,6} Seventeen parental matings were studied indicating that the disease was transmitted by a simple recessive gene.⁷ In the group of cats examined that were 2 years or older, 45% were affected. Cases of PRA in the Abyssinian cat also have been found in Holland (Stades F, personal communication, 1982), Finland,⁵ England,⁸ and Norway (Narfström K, unpublished observation).

In the present report, PRA in the Abyssinian cat will be described using animals examined as household pets, show, and breeding cats. For this reason, a

detailed study of the early visual cell degenerative process was not performed. Studies now in progress, using known affected animals maintained in a controlled laboratory animal colony facility, will be reported in the future.

Materials and Methods

During a 3-year period, 94 cases of PRA in purebred Abyssinian cats were studied. Forty-two were male and 52 were female cats, the age varying from 7 months to 10 years. Sorrel and red Abyssinian coat colors were represented in approximately equal numbers. The cases were examined throughout Sweden, at cat shows, animal hospitals, and veterinary clinics using indirect ophthalmoscopy after dilatation of the pupils. None of the cats were laboratory animals; all were owned privately and kept as pets. Thirty-seven cats were available for reexamination a minimum of two times at a 6-month interval. Out of the reexamined cats, seven cases were followed at least four times in a 2-year period. In many cases retinal photographs were taken with a handheld fundus camera (KOWA RC2, Japan). In order to facilitate a description of the disease, the ophthalmoscopic lesions characteristic of PRA in the Abyssinian cat were divided into four stages according to severity: 1, 2, 3, and 4 (see *Results*). This was also for the purpose of simplifying a correlation of results of ophthalmoscopy and of other clinical investigations. In addition to the ocular examination, the general health status of each cat, including the food intake, was noted. Metabolic screening studies of plasma and urine amino acids

PLEASE READ AND ENJOY THEIR ARTICLES AND IF YOU HAVE ANY QUESTIONS LET'S TALK ABOUT THEM.

Ross Davies, GCCF Judge and Siamese & Oriental cat breeder
Originally published -

<http://www.siamese-cat-breeder.co.uk/pr-a-in-siamese-cats/>

PRA in Siamese cats is a topic I have written about briefly before. After publishing the first article I was contacted by people in the UK who have Siamese cats affected by PRA. For this reason I decided to write another article with further information and also some suggested guidelines on responsible breeding. Please read on to see how breeding cats that are PRA positive can easily be avoided by DNA testing and selective breeding.

For clarity – PRA is equally an issue for Siamese, Orientals, Balinese and Oriental Longhairs.

What is PRA

Progressive Retinal Atrophy or PRA as it usually referred to is a disease of the retina which ultimately causes blindness. The disease is known to be present in Abyssinians, Somali **and has been widely reported to be present in Siamese and Oriental cats.**

The retina contains cells called photoreceptors which absorb the light focused on them by the eye lenses and converts them into electric signals which are passed through the optic nerve to the brain. The brain interprets these signals where they are perceived as vision.

When a cat has PRA the photoreceptors degenerate over time and ultimately cause blindness. Typically the sight in affected cats gradually gets worse with total blindness around 4 to 5 years, though there are reports of total blindness not being diagnosed until much later.

Ophthalmoscopic Testing for PRA

Testing a cat suffering from progressive retinal atrophy can be conducted by your vet where eye drops are administered to make the pupils dilate to enable observations and diagnosis of the disease.

Possible Recommendations

It would seem more than sensible to utilise the available DNA test for PRA.

- Testing our cats will help us understand the extent of the spread of the gene.
- It will also help prove or disprove the theory that all PRA positive cats will eventually be totally blind.
- By knowing the PRA status of our cats we can selectively breed away from this gene and prevent any chance of cats being born PRA positive.

Testing is available here –

[Langford Veterinary Services](#)

[UC Davis Veterinary Medicine](#)

Members of clubs registered with Langford can get a discount on DNA tests by obtaining voucher codes through their club.

Responsible Breeding and PRA

The rdAc mutation is a recessive gene that is thought to cause total blindness in cats when present twice in a cats DNA (homozygous for the rdAc mutation). Cat breeders work with recessive genes every day and when you can test for the gene it really is simple to avoid breeding cats that are homozygous for the rdAc mutation.

The problem is if you try to breed the gene out completely too quickly you will severely limit the gene pool dependant on how wide spread the rdAc mutation is.

Suggested Guidelines

As the gene has to be present twice and because of the available DNA test we can selectively breed cats that have zero chance of being homozygous for the rdAc mutation.

This would mean that any cats bred following these suggested guidelines below would have zero chance of becoming blind through progressive retinal atrophy caused by the rdAc mutation.

1. Only cats with known rdAc status should be used for breeding.
2. Carriers should only be mated to negative cats.
3. Positive cats (with both rdAc genes defective) should only be used for breeding with cats that are negative status

It could be argued that positive cats should not be used for breeding at all. A positive cat is always going to pass on one of the mutated rdAc genes. However a positive cat mated to a negative cat will result in all kittens being carrier status only. Until we know more about how widespread the gene is we do not know if the gene pool is capable of excluding all positive cats from breeding problems.

The Way Forward

We need to start testing our cats and collating the results on how wide spread the mutated gene is. We need to have far more data on how many PRA positive cats are actually going blind. Until we have this data then we cannot make an informed decision. At this stage it would seem to be the only responsible course of action to start testing cats and not breeding PRA positive cats.

Any data collated by the Siamese Cat Breeder website will be used to help build a database and will remain confidential.

From ORIVET

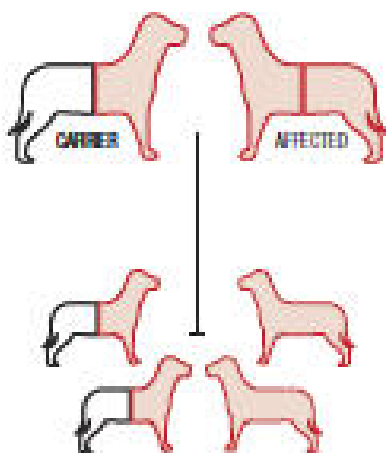

BREEDING STRATEGIES

The following diagrams are designed to assist breeders with breeding and expected outcomes when mating normal, carrier and affected animals.

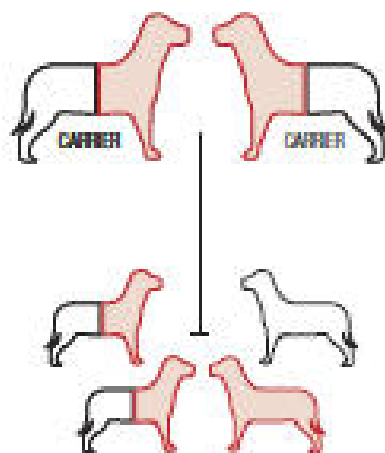

Please Note: The breeding outcomes shown in the diagrams below represent what are the expected outcomes (average) when mating NORMAL, CARRIER and AFFECTED animals. The outcomes are based on Mendelian genetics that states each individual has two factors for each trait, one from each parent. Some of the outcomes below may vary due to the probability of inheritance not being equal.

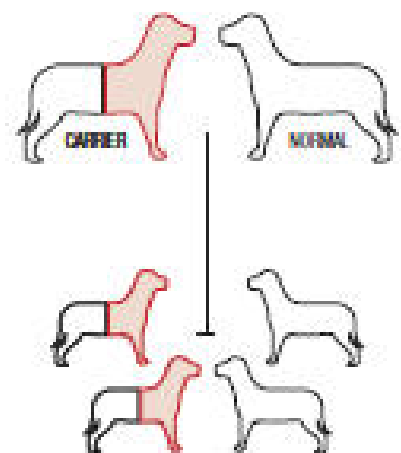

EXPECTED OUTCOMES

Affected to Carrier matings will produce
50% Carriers and 50% Affected
Note: No NORMAL Offspring produced

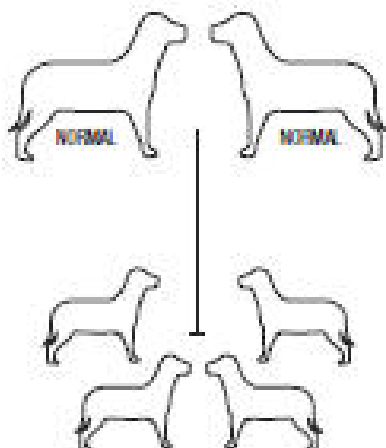

Carrier to Carrier matings will produce
50% Carriers and 25% Affected and 25% Normal

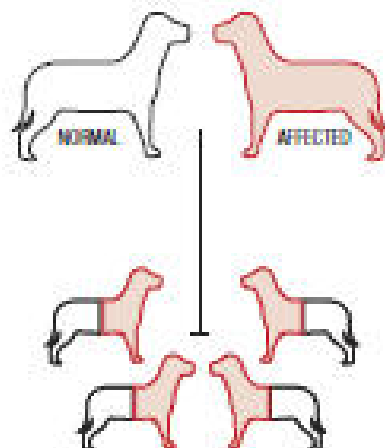

Carrier to Normal matings will produce
50% Carriers and 50% Normal
Note: No AFFECTED Offspring produced

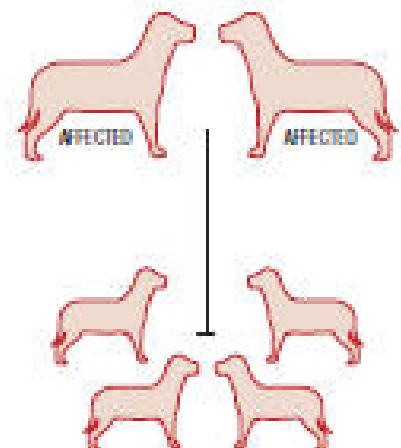

DEFINITE OUTCOMES

Normal to Normal matings will produce
100% Normal

Normal to Affected matings will produce
100% Carriers

Affected to Affected Matings will produce
100% Affected

RESCUE CATS, A LOVE STORY

The Toohey Family's Life with Siamese Cats (Furry People) by Margarite Toohey

My husband, James and I just came home from our little walk with FIVE cats in tow. Yes, you heard correctly they walk with us and always at night to avoid dogs. We have lived in our current house for twelve years and moved in with two Siamese kittens, Koko and Yum Yum (by no means our first Siamese cats but maybe I will get a chance to write about the others at a later time).

Let me introduce you to our current horde of cats. Let's start with the oldest, Calvin who is the only not Siamese but since he grew up with them he behaves just like one. He talks a lot. I hold whole conversations with him as I do with all our Siamese.

The next one in the line is Choey who was born in our house and owns everything. He is loved to death by Hannah our youngest. He is so good-

natured that she can do absolutely anything with and to him. Now in March 2013 we lost Choey's brother Chucky and maybe because we treat our cats like people we see ourselves in them. Anyway Choey was really lost. He missed his brother terribly. This is where we started to think of adopting a Siamese that was in need of a home for life. And as always the universe provides when everything is right.

Rosie a seven year old seal-point came into all our lives in November 2013. After about three weeks in our bedroom and more less kept apart from Calvin and Choey so she could get used to the two legged family members first we started to let Choey in and as he is such a lovely cat and never knew anything else but love he was happy to share us with Rosie. She also helped him immensely to get his spirits up. I know it sounds as if we talk about our cat as human but that's exactly what they are for us and they just know when one of us needs a cuddle.

When she first came we were told that she was a

complete indoor cat and in one of our first in depth conversations she and I had, I told her that if she settled right in she'd be able to go anywhere (outside) she liked. All our cats are in and outdoor cats with a cat door that was particularly installed in a glass pane when we moved in twelve years ago.

Fast forward to November 2014. I left my name with the Siamese Cat Society NSW, to indicate my willingness to adopt another cat if it needs a good home. An email landed in my inbox from Tony Hurry that two blue-point brothers, Ziggy and Sonny Dee (we renamed him from Honey Bee) are in dire need of a new home.

After a short consultation with all the family members I rung straight away to let him know that they are most welcome at our place. The excitement before their arrival was incredible. Just to demonstrate that a lot of things move in circles: Exactly twelve years to the month prior to their arrival we rescued another pair of this time seal-point Siamese, Rajah and Mikey (very sadly they went to the big kitty litter in the sky a while ago). This synchronicity left us all a bit speechless. Once again we did not anticipate any difficulty in integrating the 'Blues Brothers' as we affectionately call them and there was none. I would have liked to call them Jake and Elwood but this was to different from their original names so we think of Ziggy Stardust and Sonny Bill Williams.

What a enriched life we all had because of all our cats presence I cannot emphasise enough and while I am

typing here over the head of our much loved Choey I can only conclude that a house is not a home without a Siamese and an honorary Siamese (Calvin) cat.

How can LJ Hooker Picton help you?

SELLING YOUR PROPERTY?

When you engage LJ Hooker Picton you'll have a wealth of experience, local knowledge and resources at your disposal. From preparing your home to the right marketing strategy, we will guide you through the experience.

BUYING A PROPERTY?

LJ Hooker Picton doesn't just understand the property market but the neighbourhoods that make it from local amenities and schools to transport and community organisations.

RENTING YOUR PROPERTY?

LJ Hooker Picton offers a wide range of services designed specifically to make property investment less stressful. We maintain a high standard of training and knowledge of relevant legislation. You will receive the finest service in the management of your most valuable asset.

Life and Trials of the Siamese Cat Society Trailer.

By Sharryn Hilton

Built especially for the Society way back in 1982 with extra care to ensure it was not susceptible to rust. It has been a loyal assistant.

It has been housed with various members of the committee over the years, to try to keep it in good order and safe from vandalism. It's been under cover and out in the open and everywhere in between. It's resided in lots of different places by the kindness of a few committee members, in the past.

Registration and tyres were the usual repair bills over the years, so it was understandable when upon its trip to its latest safe haven, things seemed apparent that would now need to be done. Unfortunately, not just the tyres and registration this time.

A list of problems were noted which stopped the trusty trailer from being registered and permission was sought through the committee to have these repairs done. Such things like bushes, shackle bolts, brackets, brakes, lights, 4 new tyres, and the

list went on. The only things that couldn't get done, were the drums for the brakes, they are not available as a market purchase but the mechanic is still on the hunt for them and hopefully we will be able to get them in the future, as needed.

It was unanimous that we wanted to retain the trailer and therefore take on the repairs as necessary.

The vote was cast and all said yes. Fingers were crossed that it wasn't going to exceed a limit which we set. The trailer spent many weeks at the mechanics because certain parts for the trailer were unobtainable in today's market and things had to actually be made to fit to suit the uniqueness of our little trailer. The builder of the Trailer was no longer in business.

The committee members were getting nervous when each of the

things were spoken about and the dollar signs sounded loudly in our heads.

As time went on and the trailer was still not repaired the bill was imagined to be a huge one.

But... Our sincere thanks as a group, must go to **SCS Vice President John Ferguson**, who was able to pull a few favours from a mechanic friend to get some of these major repairs done to enable us to retain our trailer for years to come.

When the bill finally came in, it was with a huge sigh of relief that it was nothing in cost that was anticipated.

The mechanic had not charged for so many things it was almost embarrassing, but said he was happy to help out our little band of volunteers.... So thanks must also go to **Lou Amato**, who owns **AUTOPLUS PICTON**. Without his kindness and John's sweet talking it would have been a much larger bill for our trailer.

The bill including 4 new tyres was a grand total of \$890.00. (A minor sum considering it is the first maintenance done in 33 years!)

It was then able to pass registration and resume the task of serving the SCS. A total win for us all, now hopefully it will do us all for a few more years to come!!

IN MEMORIAM

The thoughts and prayers of the members of the Siamese Cat Society go to one of our most recent members karrin Hedgecock for the much too early loss of her husband Neil who sadly passed away 19th September 2015 after a short illness.

NOTICE TO MEMBERS

At its 2015 February General Meeting discussion was held regarding the current fee structure. As a review of costs had not taken place with a subsequent increase for some years, and due to rising costs of providing FELIS, increased postage rates and managing and maintaining our SCS website service, it was agreed that fees needed to be increased. A motion to that effect was proposed and seconded and carried unanimously.

Our Fees for 2016 are therefore as follow :

Full Member:	\$21.00	Advertisement - Full Page	\$33.00
Joint Member:	\$35.00	Advertisement - Half Page	\$18.00
Associate. Member:	\$14.00	Advertisement - Quarter Page	\$12.00
Website Kitten Listing	\$15.00	Siamese Cats at Stud List	- Free
FELIS	- Free to members	FELIS, Back Copy	- \$5.00
			or Free via electronic Copy

At our 31st October 2015 Committee meeting it was agreed unanimously to introduce a new category of member being :

***Introductory Member: 50% of Full Member /Joint Member Fee
for initial year's membership.***

ONLY for those Siamese owners introduced by a current financial member.

This is to further encourage breeders when selling their kittens to entice the new owners in to becoming members. There are some of our breeders who are paying this fee being inclusive in their selling price.

Reg. Cats NSW CN013
Quality one breed Siamese

Breeder's of quality 'One Breed' Siamese

in the only original 4 colours:

*** Seal * Chocolate * Blue * Lilac**

Fullcircle Siamese is a small but extremely proud Cattery for the producing of good, old-fashioned type Siamese.

All our kittens have been well placed in show and pet homes and are lovingly reared as part of our family. Our cats are renowned for their character and great "puss-onality".

We are also proud owners of our much prized USA Import Lilac Point Stud, a complement to our Seal, Blue, Lilac and Chocolate Point queens.
